PC Protection Plus Quick Install Guide

- **Important!** A valid subscription key and an Internet connection are required to install the software.
- **Important!** This software will automatically uninstall other anti-virus, ad-ware, spyware, and/or firewall software. Please read and follow prompts closely to ensure proper installation of F-Secure SPC and removal of the other software packages.
- **Important!** If F-Secure is installed on a computer with multiple user accounts (such as Windows 7, Windows Vista, Windows XP, or Windows 2000), it must be installed on an account that has administrative rights.

The best in breed security suite just got better!

F-Secure PC Protection Plus provides complete protection against the latest Internet threats, whether known or previously unidentified.

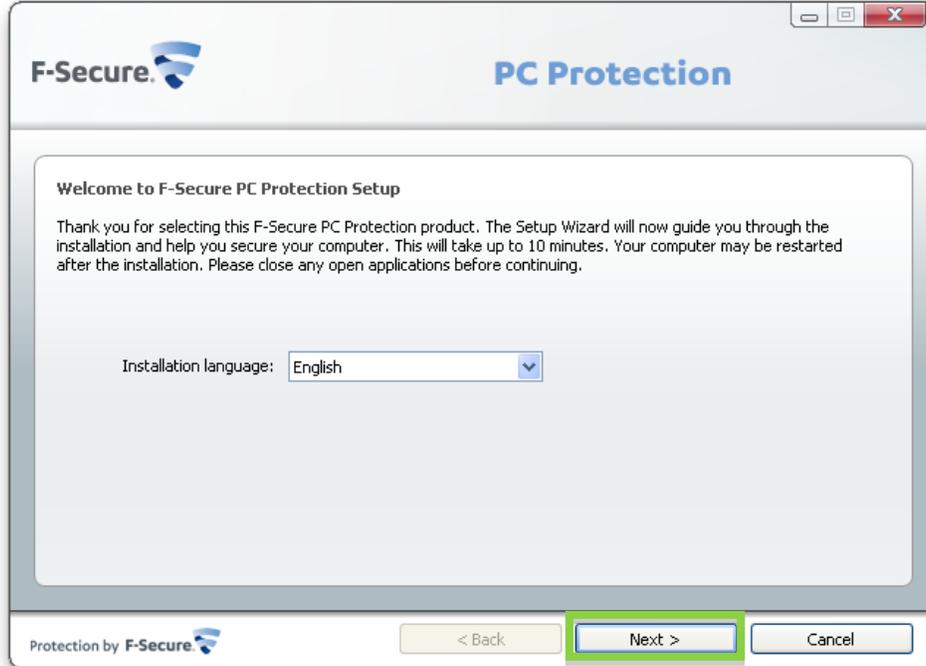

The new F-Secure PC Protection Plus includes advanced Parental Controls and everything needed to protect a computer against threats originating from the Internet: Anti-Virus, Firewall, Anti-Spyware, Anti-phishing, and Anti-spam.

Easy Installation

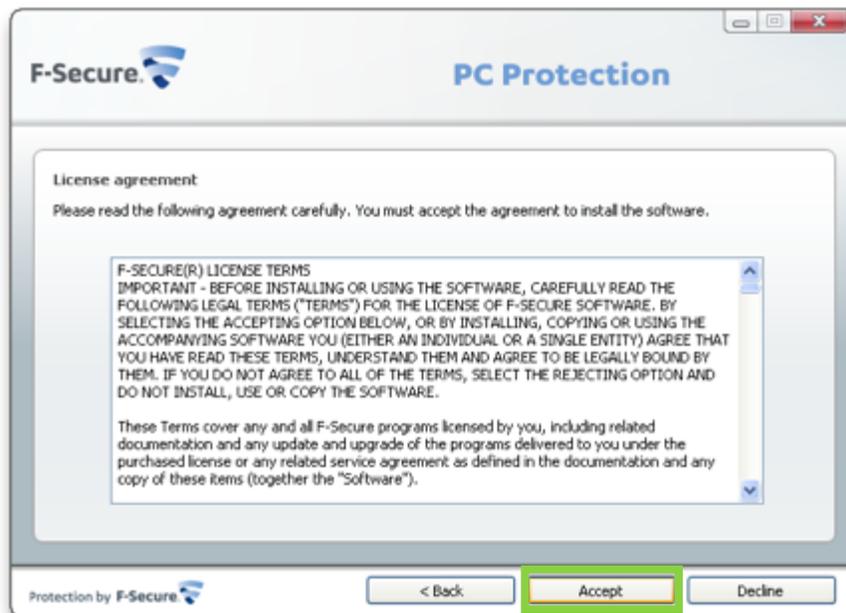

This guide will assist in the installation of F-Secure, as well as explain various functions and features.

1. Installation

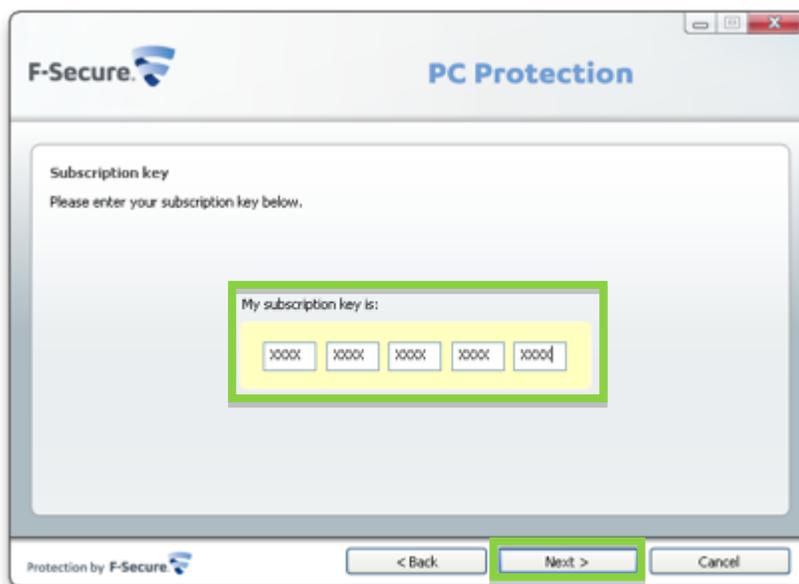

1.1 Choose the language that F-Secure will be displayed as. Click the “Next” button.

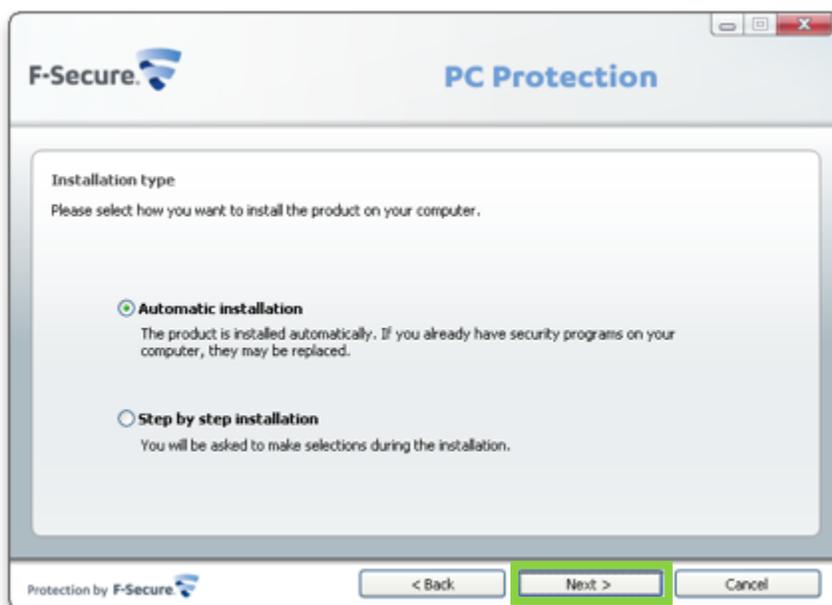

1.2 Review the license agreement. Click the “Accept” button to accept the terms and the “Decline” button to decline the terms. **Note:** Clicking the “Decline” button will stop the installation.

1.3 Enter the subscription key that was assigned by the ISP provider. Click the “Next” button, to begin the installation.

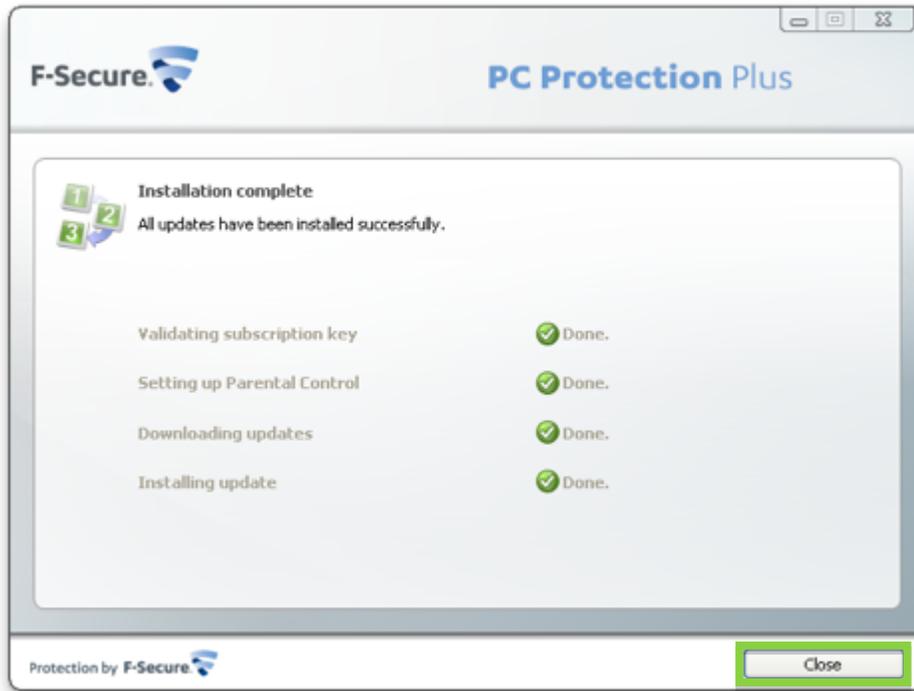

1.4 Choose the type of installation to be installed. It is recommended that the automatic installation be selected, as it includes all of the security features. These features can be enabled or disabled at any time. Click the “Next” button to continue.

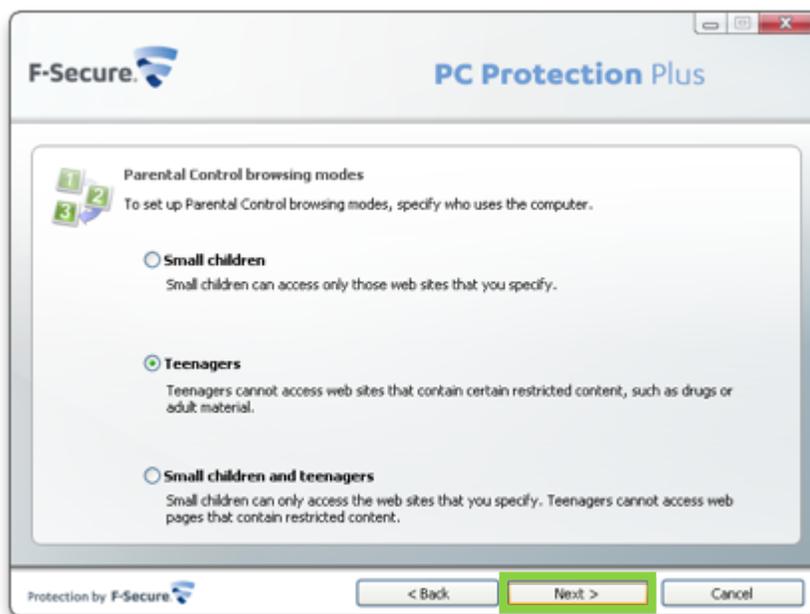

Note: F-Secure will begin to install. This may take several minutes. Once the files are installed, click the “Restart” button to restart the computer and complete the installation process.

1.5 Once the computer has been restarted, F-Secure will validate the Subscription Key. Click the “Next” button.

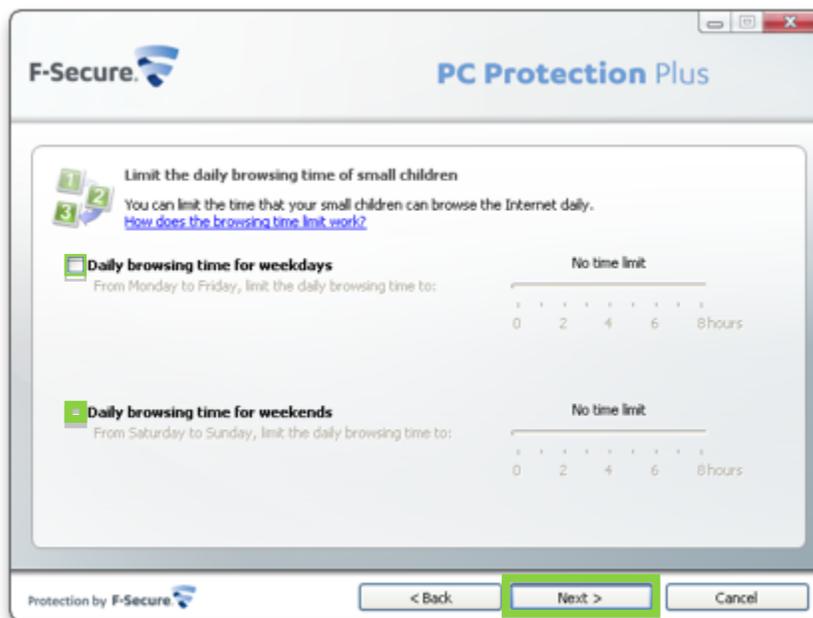

Note: The computer must be connected to the Internet for F-Secure to validate the Subscription Key.

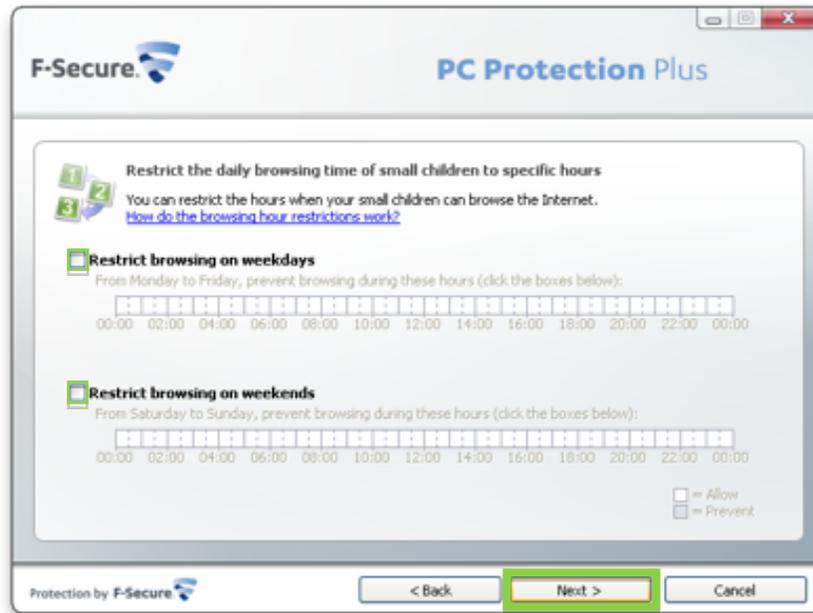

1.6 Carefully read the *Parental Control* options and select the preferred. These settings can be modified or disabled as needed. Click the “Next” button to continue.

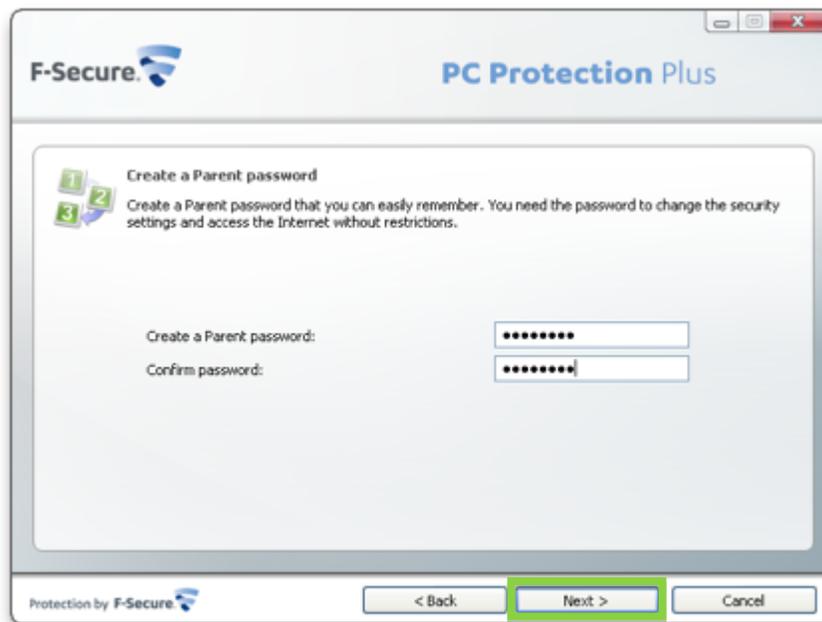

1.7 On the next window you can select the amount of time the user can browse. Click the “Next” button to continue.

1.8 You can now select the time of day that a user can browse. They can only use the Internet during this time, and only up to their daily allotment. Click the “Next”.

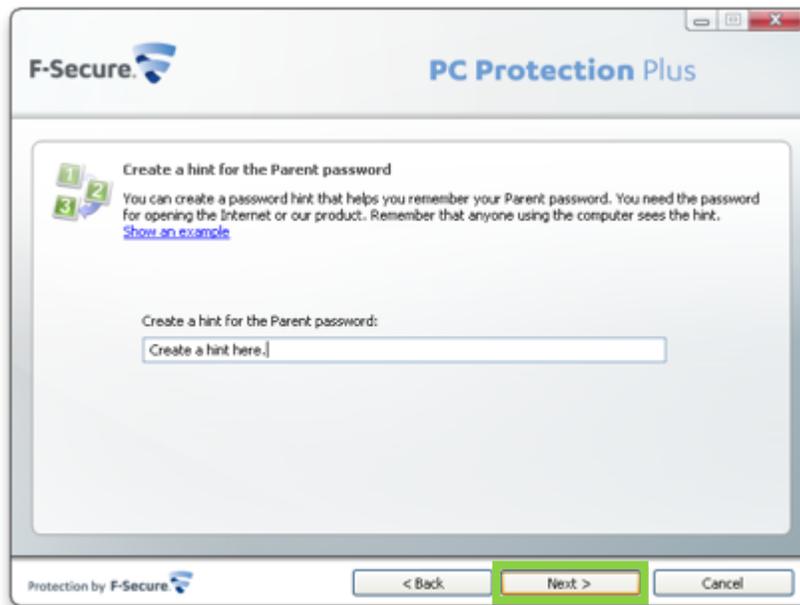

1.9 Create and enter a parental control password. Then click “Next”.

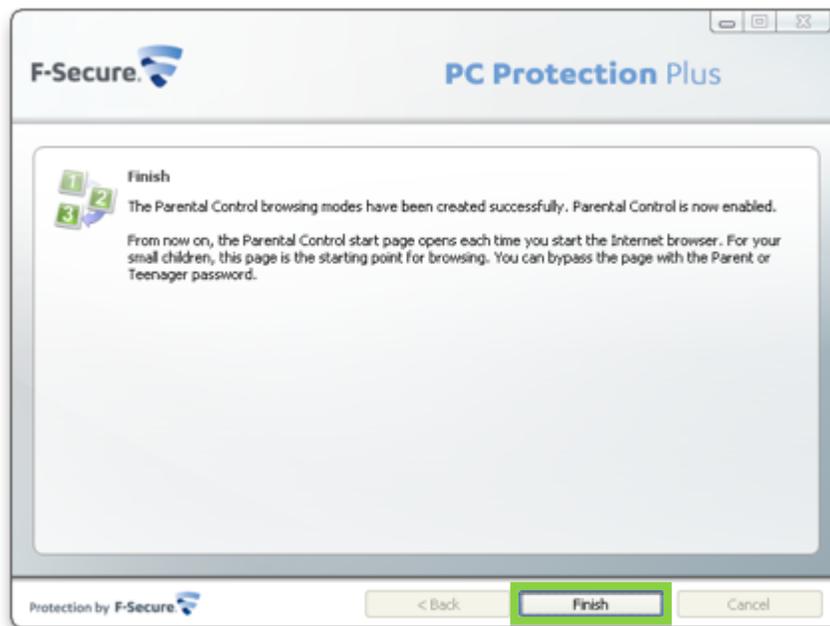

Note: To change features you will be asked to enter your password.

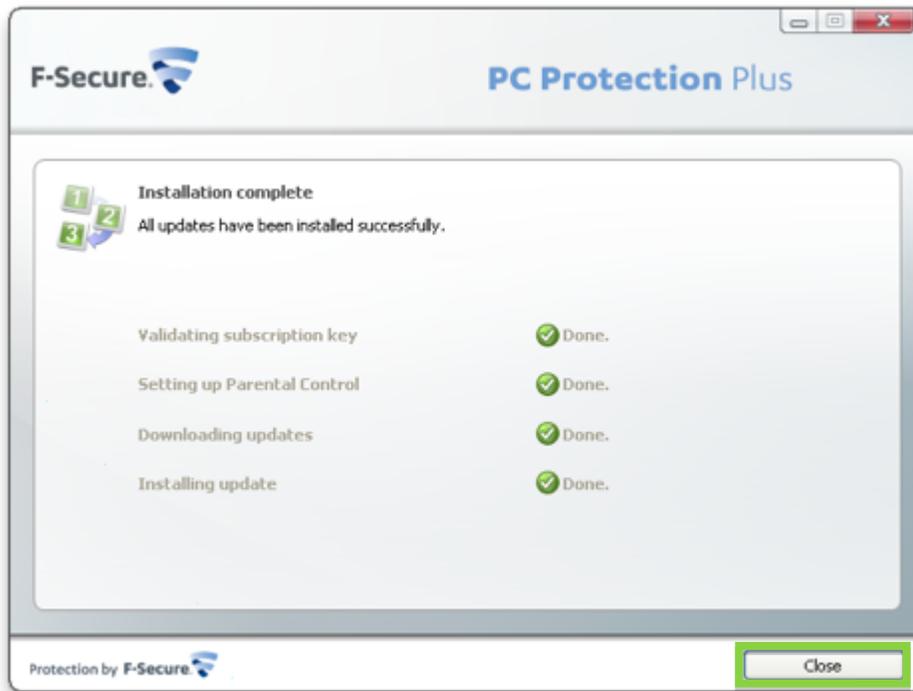

1.10 Here you can set a hint for your password in case you forget it. Remember anyone that uses the computer can see the hint. Click “Next” to continue.

1.11 At this point you are finished setting up your basic parental control features. Click “Finish”.

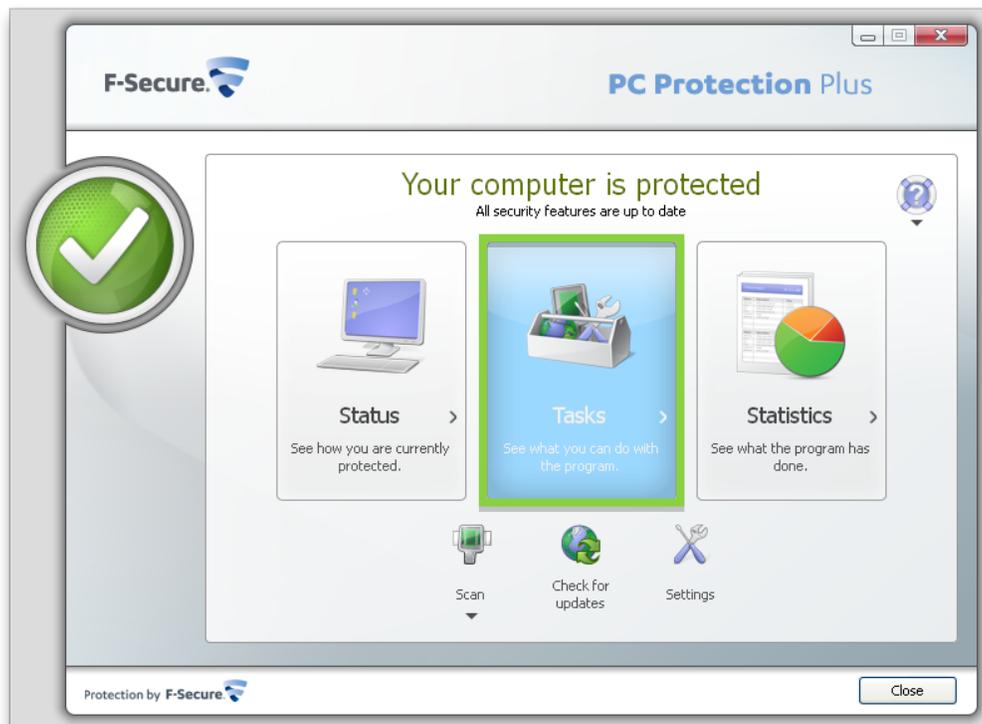

1.12 The computer will now restart. When it comes back up, you will see a new window doing updates and finishing the installation. When all four steps are “Done”, click “Close”.

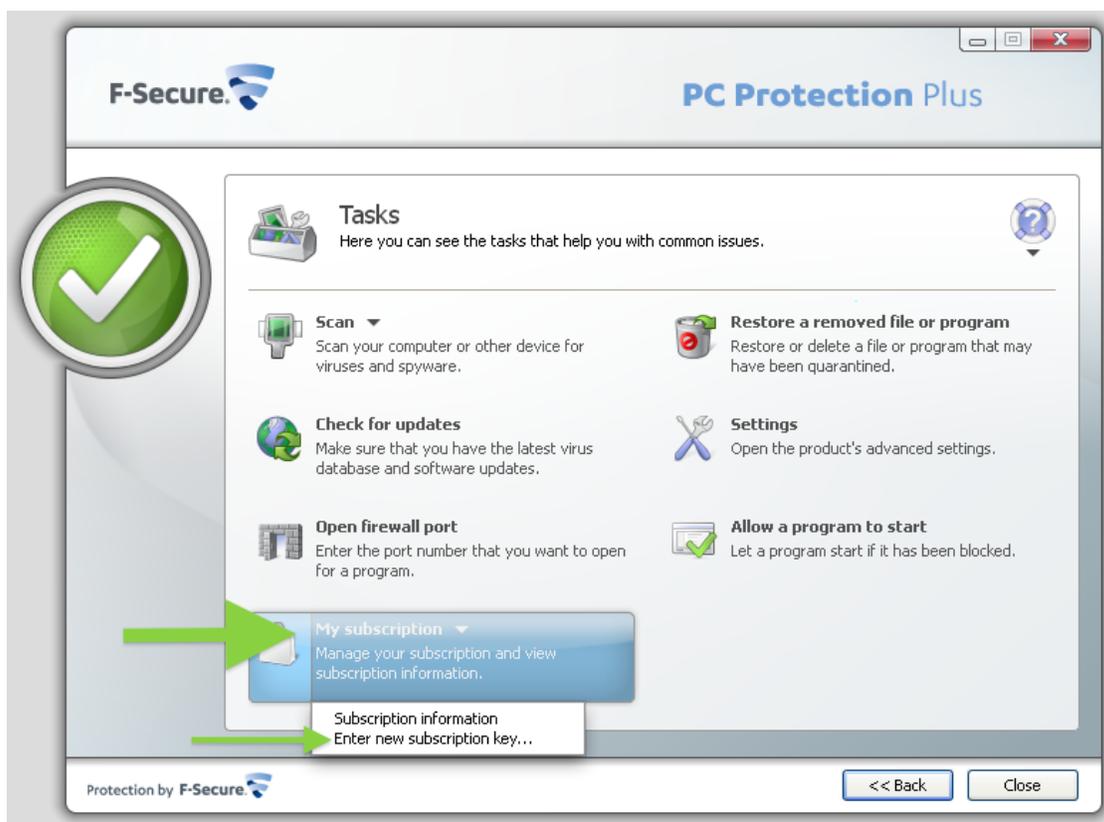

2. Changing the Activation Key

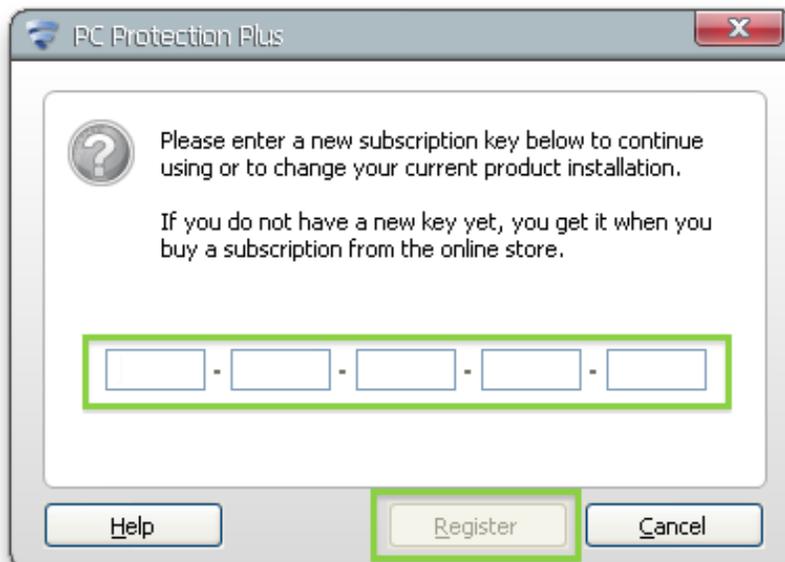

2.1 Click the “Tasks” button in the center of the window.

2.2 Click on “My Subscription”, then click “Enter new subscription key” from the drop-down menu.

2.3 Here you will need to enter your new subscription key. Once you enter the full key, the “Register” button will be clickable. Click the “Register” button to finish.

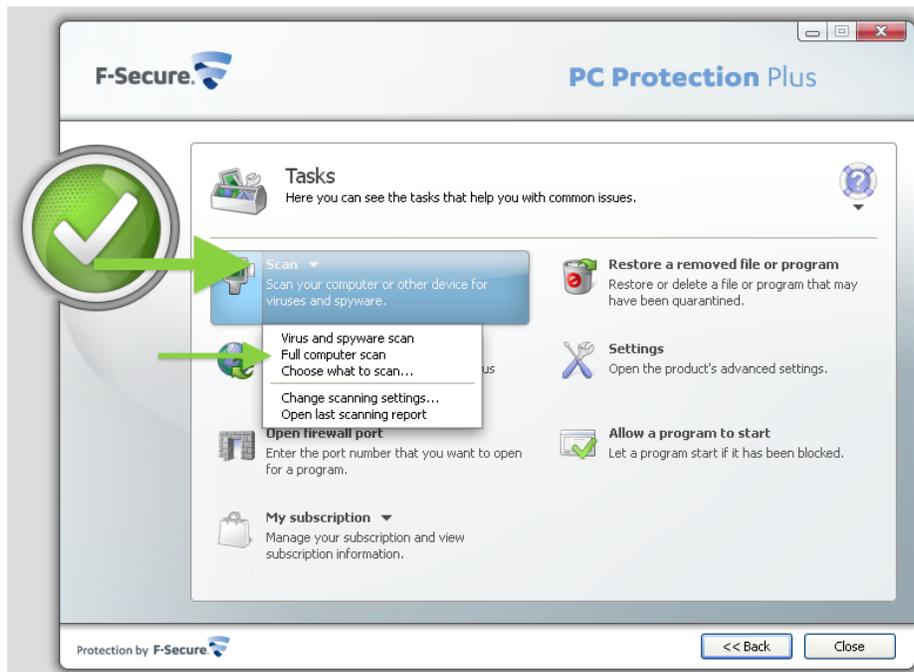

3. Scanning for Viruses

3.1 To Perform a Full System Scan:

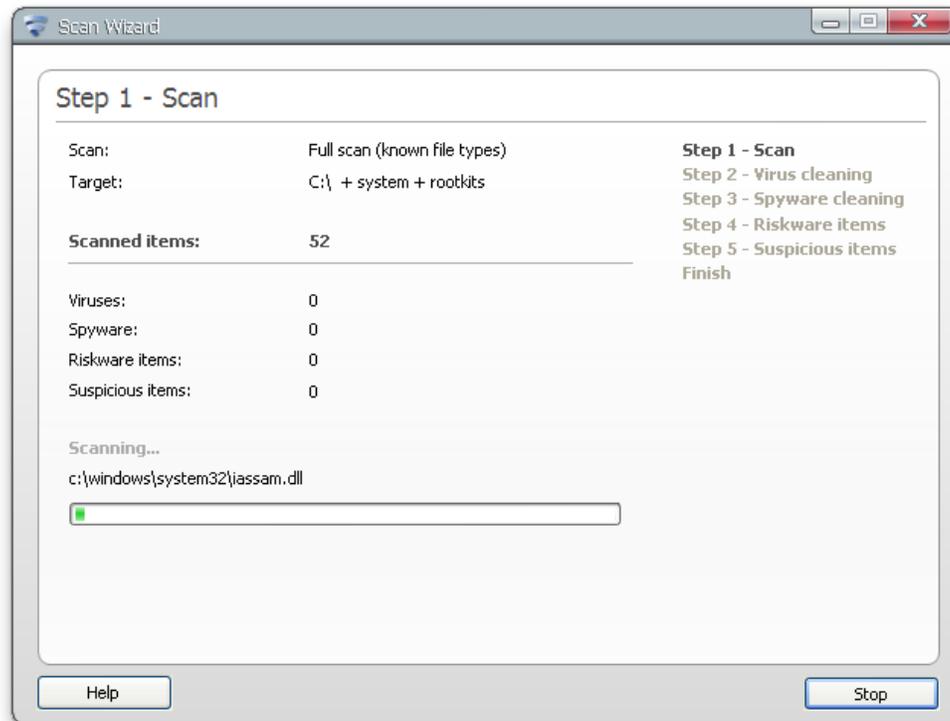

3.1.1 Click on “Tasks”.

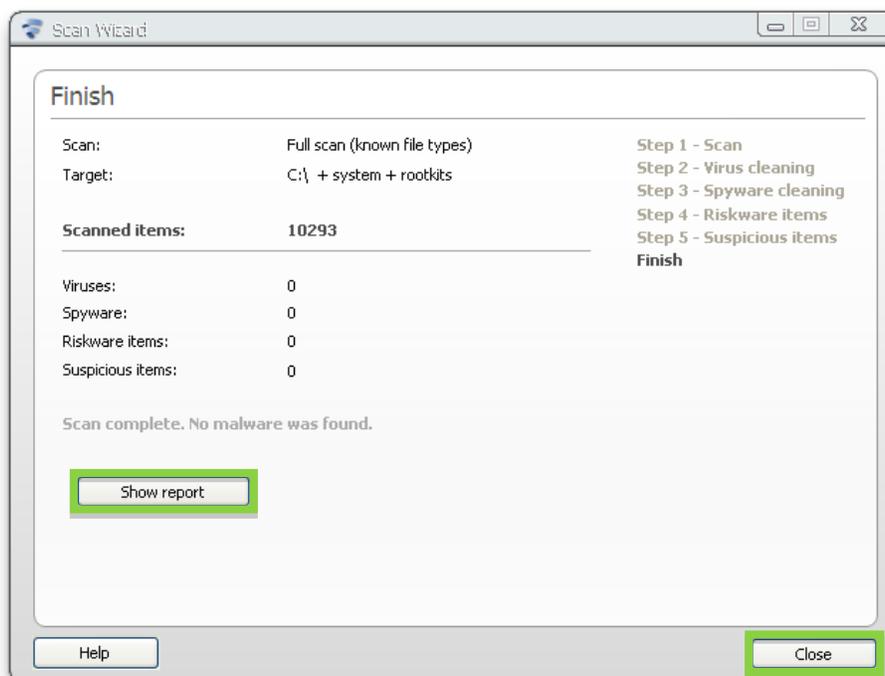

3.1.2 Click on “Scan”, then from the drop down click on “Full computer scan”.

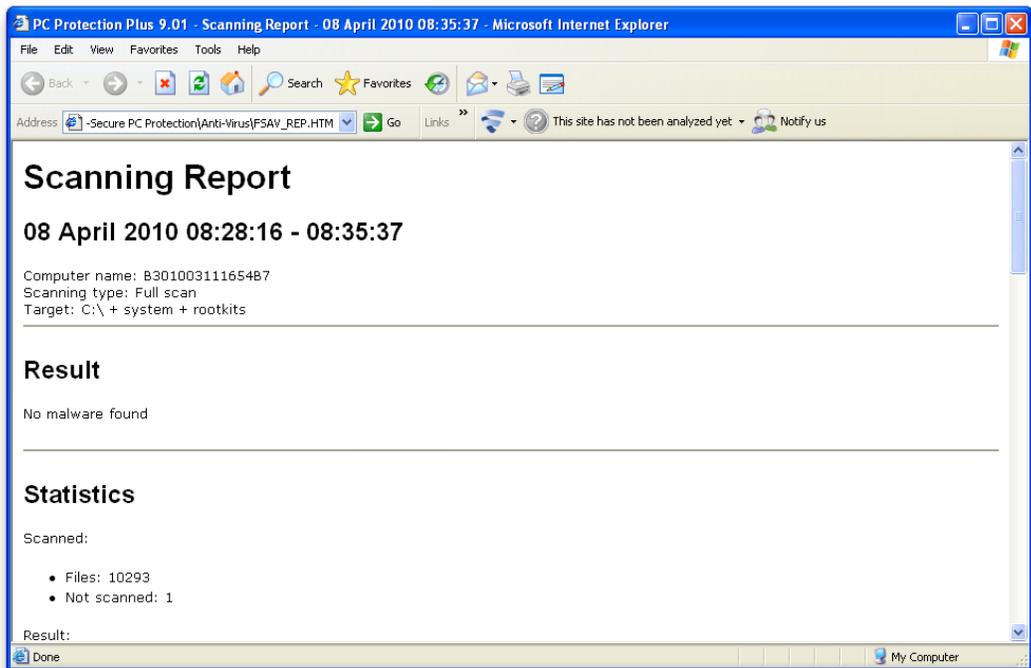

3.1.3 It will now begin scanning your entire computer.

3.1.4 If F-Secure finds any malicious software it will automatically remove or repair the problem. After it done scanning your computer, it will give you an option to look at the scan report. If you choose to not look at the report, Click "Close".

Example Scan Report

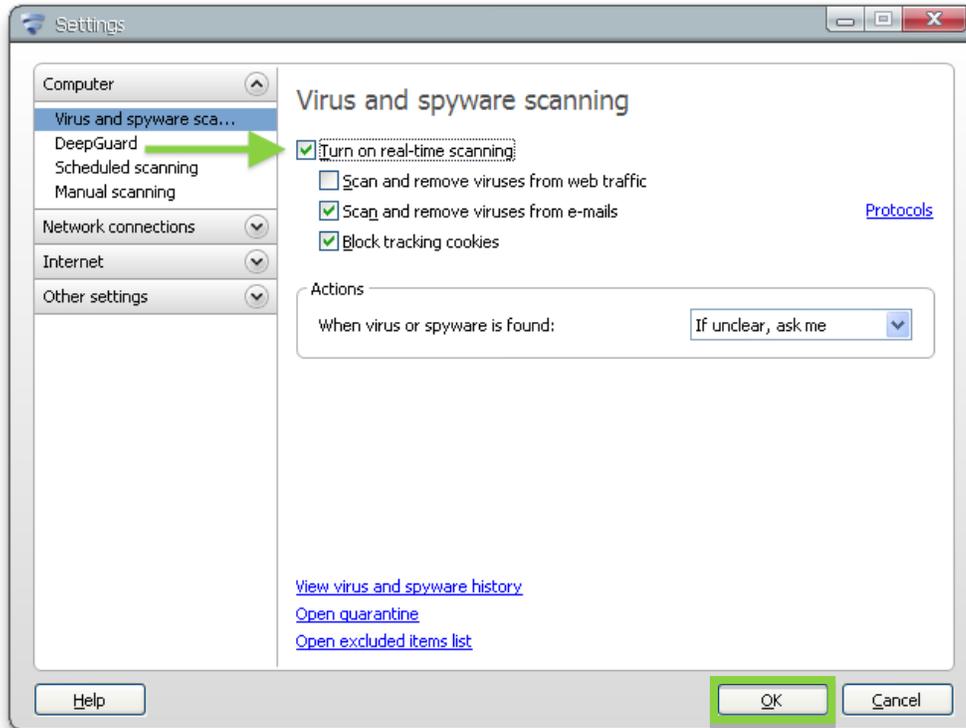

3.2 To Enable Real-Time Scanning

3.2.1 Click on "Settings".

3.2.2 Change the setting as needed. Then click "Ok".

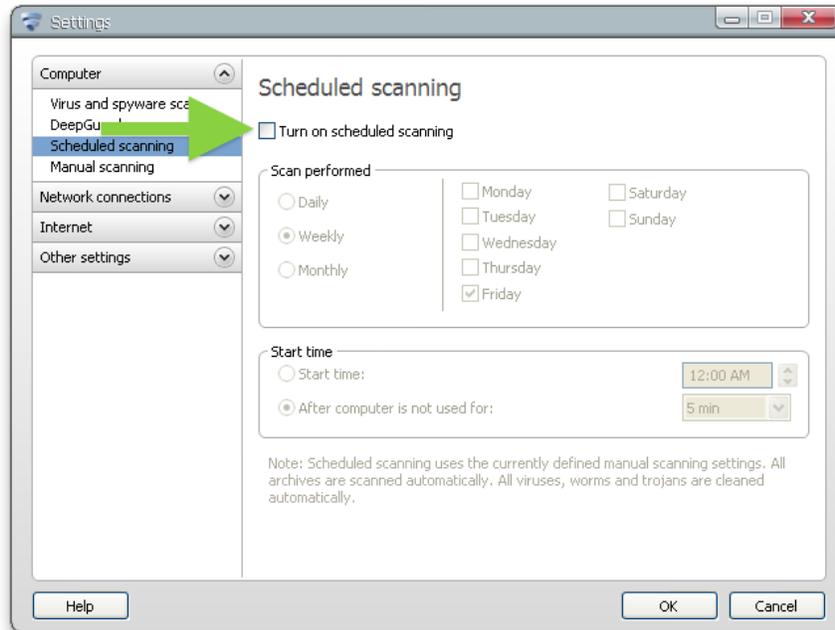

3.3 To Enable Scheduled Scanning

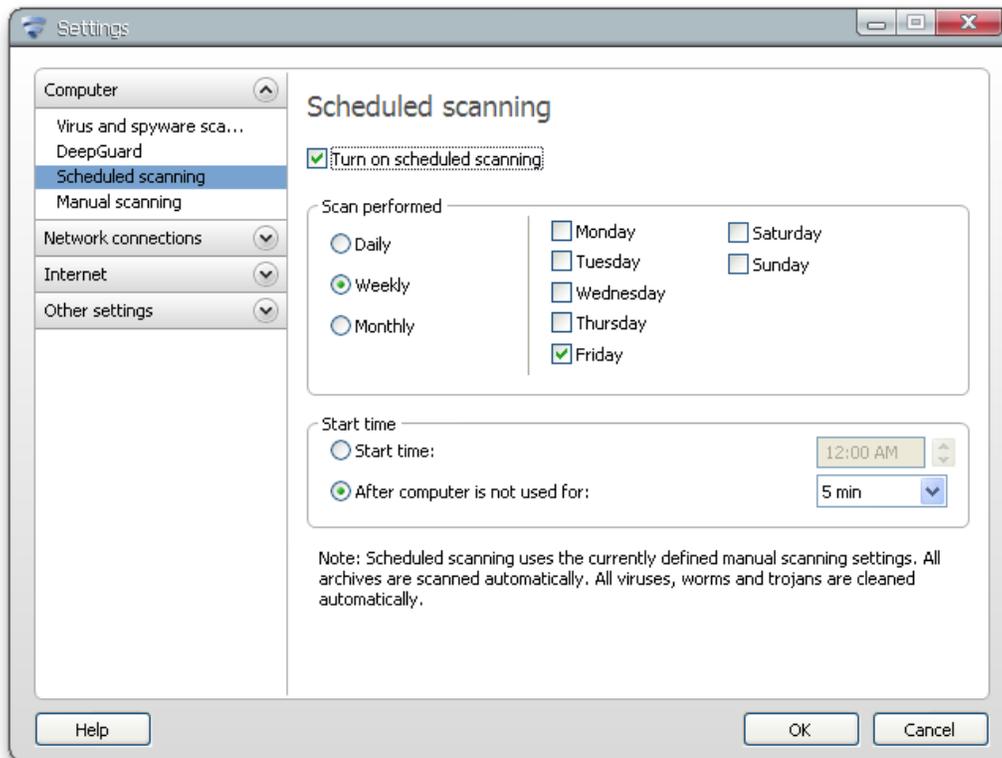

3.3.1 Click on "Settings".

3.3.2 Click on the checkbox next to "Turn on scheduled scanning".

3.3.3 After enabling the Scheduled Scanning option, choose the preferred options to scheduled how often and what day the schedule should automatically run.

3.3.4 Select the "Start Time" from the drop-down menu.

Start time

Start time: 12:00 AM

After computer is not used for: 5 min

Note: Scheduled scanning uses the currently defined manual scanning settings. All archives are scanned automatically. All viruses, worms and trojans are cleaned automatically.

3.3.5 If preferred, F-Secure can be configured to run a scan after the computer has been idle for a specified period of time. To enable this feature, select the appropriate option from the drop-down menu.

Start time

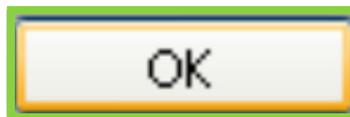

Start time: 12:00 AM

After computer is not used for: 5 min

5 min
15 min
30 min
60 min

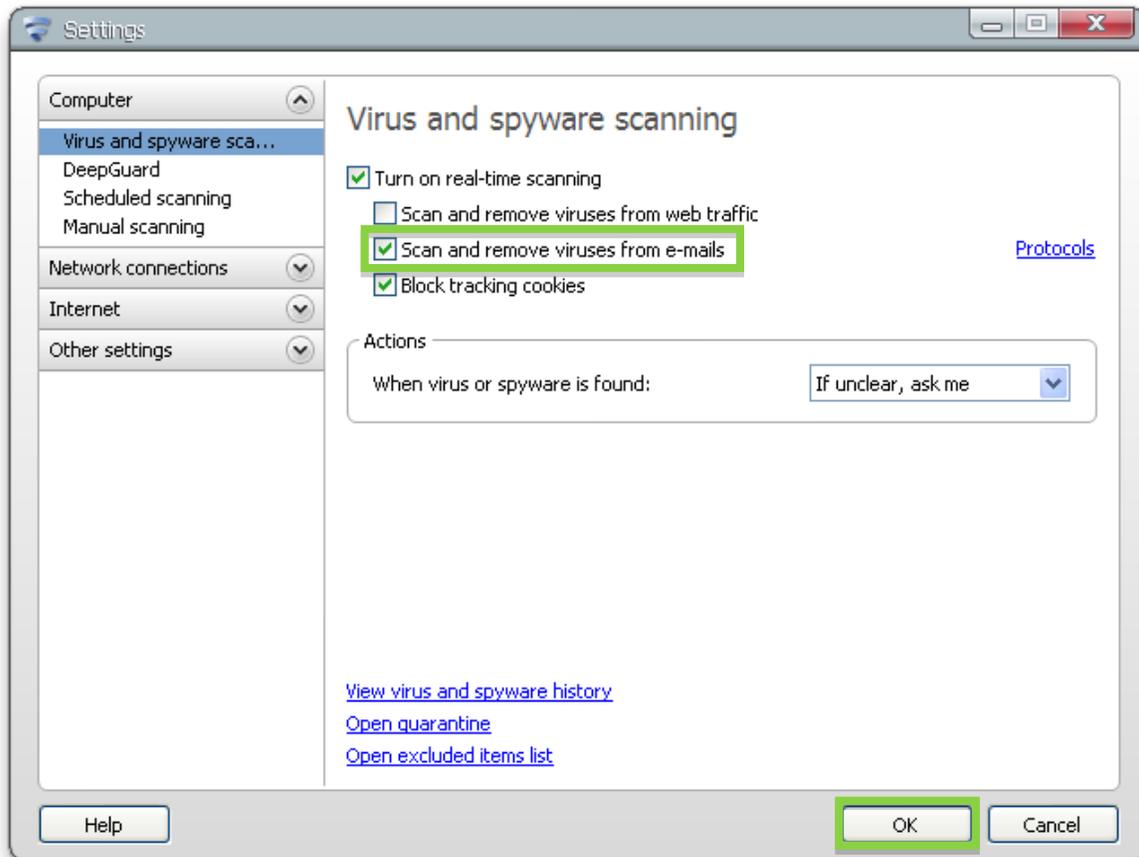

Note: Scheduled scanning uses the currently defined manual scanning settings. All archives are scanned automatically. All viruses, worms and trojans are cleaned automatically.

3.3.6 Click the "Ok" button to finish.

5. Scanning E-Mail.

5.1 Email scanning is included in "Real-Time Scanning".

5.2 Click "OK" to finish.

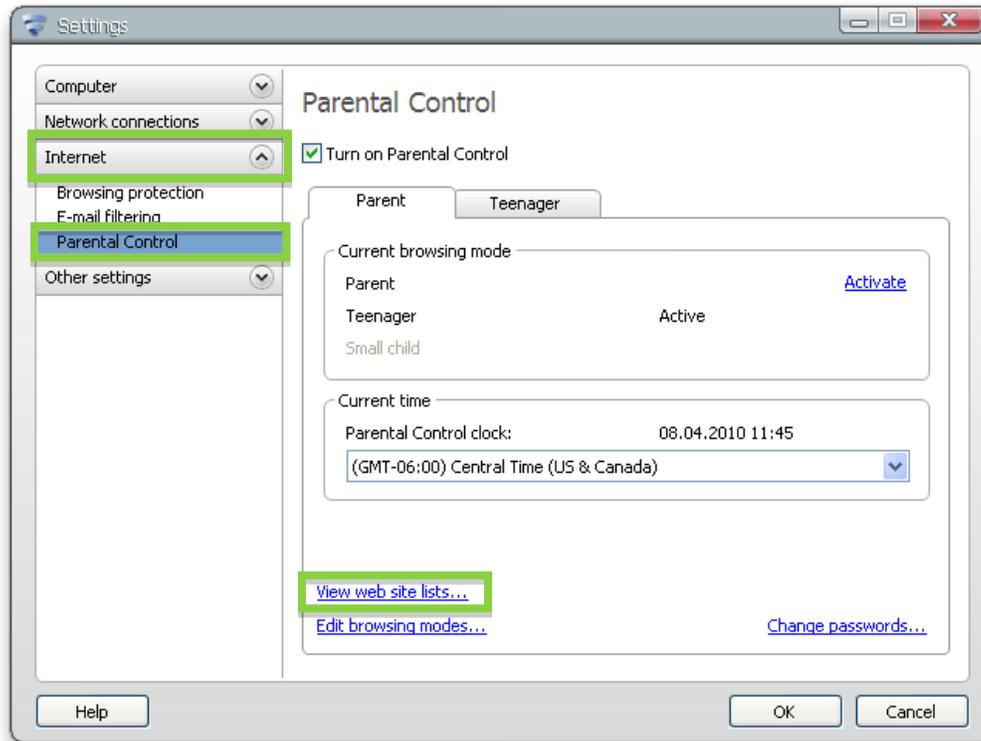

6. Parental Controls

6.1 Blocking Sites

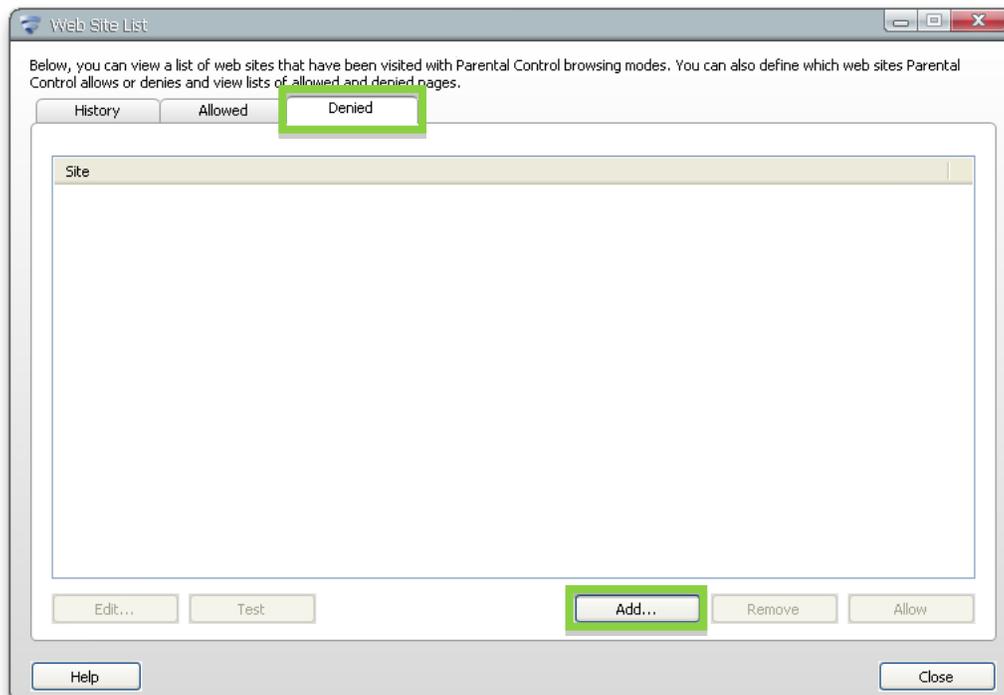

6.1 Parental controls were configured during the last part of the installation, so I am going to show you how to block specific sites. Click "Settings".

6.1.2 Click on "Internet", then click on "Parental Control". You should now be on the screen below. Look towards the bottom and click on "View web site lists..."

6.1.3 Click on "Denied", then click on "Add..."

6.1.4 The below box will appear, follow the directions on how to deny a site. Type the site you would like to block, then click "OK".
